

Does your customer require pallet label identification with the UCC/EAN128 code?

SmartLabeling

is the right solution for you. Three versions of this printing system represent an ideal solution both for small firms and big manufacturing units with printing of a large number of labels by many printers.

Identification of pallets with labels according to the UCC/EAN128 standard is gradually more and more required by retail & distribution chains owing to efficient processing of data when receiving the goods, incl. data required for food traceability.

This tool enables printing not only of UCC/EAN128 pallet labels but also of product labels and labels for identification of packsizes and distribution packing. You will not need another system for label printing.

The pallet labels will contain all the information as required by your customer. If your customer has special requirements on labels, no problem. Each customer of yours shall be automatically provided with its own unique label.

Printer Support

One can print nearly by all existing label thermal wax transfer printers and laser printers. We do not force you into buying a new printer.

Easy Operation and Smooth Ergonomics

SmartLabeling provides very easy and comfortable operation without the requirement of qualification of the operating staff. You just select the product from the code list, and the pre-set data shall be added, such as standard quantity or weight. You will just add possible other data such as best before, production lot or customer name. Each customer may be provided with a special label format. Then you just enter the required number of labels.

Integration Into the ERP System

Higher versions are equipped with executive tools for integration of this print system directly into the company information system. Label printing may be fully automated and integrated into your standard processes.

Integration Of Design Software

The system is delivered without the label designer. The SmartLabeling system price includes the design of several labels depending on the version of the purchased software. These labels will be designed directly as per customer's requirements.

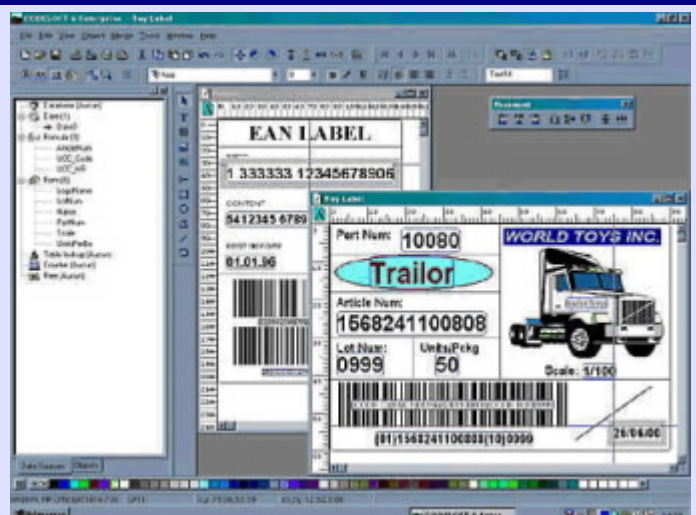

If you find this useful, we may send you executive software for label designing and the whole printing system will be under your control. You will carry out all changes in the label formats and designs of new patterns by yourself. If you do not utilize this possibility, we will be happy to deliver new patterns of labels precisely as per your requirements for favourable prices.

Zebra Z6Mplus

- DT/TTR printer
- Max. print width: 168 mm
- Max. print speed: 254 mm/s
- Industrial and commercial printer
